

Data mart

Definition

A data mart is a subset of data from a data lake or data warehouse, tailored to the needs of a specific department or team.

Note

A data mart makes it easy to access and analyse the data needed, without having to sift through all of the data in the data lake or data warehouse.

Relation

| | | |
|-----------|--------------|----------------|
| Data mart | is subset of | data lake |
| Data mart | is subset of | data warehouse |
