

# Data modeling

## Definition

Data modeling is a step in the lifecycle of [data](#) that results in a [data model](#).

## DMBOK2

Data Modeling is the process of discovering, analyzing, and scoping data requirements, and then representing and communicating these data requirements in a precise form called the [data model](#). This process is iterative and may include a conceptual, logical, and physical model.

## Relation

Data modeling	is part of the lifecycle of	<a href="#">data</a>
Data modeling	results in	datamodel
