

# Equivalence

## Definition

Equivalence of data elements is the degree to which a [data elements](#) stored in multiple [datasets](#) are conceptually equal.

## Note(s)

Data elements in different datasets could have different formats, different names, subdivided in multiple data elements or even different descriptions, but still have the same meaning.

## Relation

Equivalence	is a <a href="#">characteristic</a> of a <a href="#">data element</a>
-------------	---
