

Redundancy

Definition

Redundancy of dataset is the degree to which to which logically identical [data](#) are stored more than once.

Relations

| | | | | |
|------------|------|--------------------------------|----|----------------------|
| Redundancy | is a | characteristic | of | data |
|------------|------|--------------------------------|----|----------------------|

Examples(s)

The article data were maintained in multiple [data files](#). They were redundantly stored. This caused problems with the consistency. There was no single source of truth.
