

# Uniqueness

## Definition(s)

- 1) Uniqueness of data records is the degree to which [data records](#) occur only once in a [data file](#).
- 2) Uniqueness of the appearance of an object in a data file is the degree to which [objects](#) (in the real world) occur only once as a [data record](#) in a [data file](#).
- 3) Uniqueness of primary keys is the degree to which [primary keys](#) occur only once in a [data file](#).

## Note(s)

In general, duplicates should be deduplicated.

## Relation(s)

Uniqueness can be a [characteristic](#) of [data records](#), the appearance of [objects](#) in a [data file](#) or [primary keys](#).

## Example(s)

- 1) This article appears twice in a [data file](#) under the same article number. This is the easiest to detect.
- 2) This article appears twice in a [data file](#) under a different article number. This can only be discovered by comparison of other fields than the article number.
- 3) Two different articles appear under the same article number in a [data file](#). This can only be discovered by checking double article numbers and then compare other fields than article number.
