

# Uniqueness

## Definition(s)

1. Uniqueness of data records is the degree to which [data records](#) occur only once in a [data file](#).
2. Uniqueness of the mapping of an object in a data file is the degree to which [objects](#) (in the real world) occur as one [data record](#) in a [data file](#).
3. Uniqueness of primary keys is the degree to which [primary keys](#) occur only once in a [data file](#).

## Note

In general, double [data records](#) should be deduplicated.

## Relation(s)

Uniqueness	is a <a href="#">characteristic</a> of	<a href="#">data records</a>
Uniqueness	is a <a href="#">characteristic</a> of the mapping of <a href="#">objects</a> in a <a href="#">data file</a>	
Uniqueness	is a <a href="#">characteristic</a> of	

- This article appears twice in a [data file](#) under a different article number. This can only be discovered by comparison of other [data elements](#) than the article number.

1. Two different articles appear under the same article number in a [data file](#). This can only be discovered by checking double article numbers and then compare other [data elements](#) than article number before deduplicating.
