Severity	Data quality issuesare resolved in order of severity.

Relations

Data quality issue	is child of	issue
Data quality issue	is an element of a	data quality management system
Data quality issue	is one of the principles of a	data quality program
Data quality issue	can be caused by	data entry processes
Data quality issue	can be caused by	data migration
Data quality issue	is a subject in a	data quality service level agreement
Data quality issue	is identified by	data profiling
Data quality issue	is prevented by applying	data quality rules
Data quality issue	is identified and resolved by	data stewards
Data quality issue	is resolved by	data cleansing
Data quality issue	is eliminated by	corrections
Data quality issue	is prevented by	corrective actions
Data quality issue	is prevented by	preventive actions
Data quality issue	can be easiers assessed by	data lineage
Data quality issue	can be tracked in an	incident tracking system
Data quality issue	is detected and reported by	data quality monitoring

Data quality issues escalation path

The figure shows a possible escalation path of data quality issues.

Figure 2: Data quality issues escalation path.

Story

A customer of the TradeAll trade company complained that he had been delivered an incorrect item. The sales department reported this incident in the Incident Tracking System, which was assigned to the Data Steward. The Data Steward then went to see how this could have happened. He found that the item number did not match the item description and suspected that this was due to a data entry error. Based on the item number, the products were taken from the warehouse.

He corrected the item number (Correction), but to prevent this kind of error, he took the measure that the entry of items was checked by a second person to prevent more incidents (Corrective Action). He also made sure to check for duplicate item numbers in the database (Corrective Action).. The customer was apologised for the error and the correct article was delivered as soon as possible.
