- Procedure to monitor the policy
- Procedure to evaluate and adjust the policy

Additional content

- Historical context
- Roadmap for implementation
- References
- Definitions of terms
- Document version
- Management that established the latest version of the policy

Examples

The next sections show fragments of some data quality policies.

Fragment 1: Braintree District Council

It is vital that the systems used to collect, store, and calculate performance information:

- are accurate and
- any faults or errors are identified.

All systems need to be checked and tested regularly

Fragment 2: Isle of Wight – NHS Trust

It is acknowledged that on occasions, data quality issues such as errors or omissions will be identified. It is imperative that where this is the case, they are reported to the relevant Information Asset Owner, who will be responsible for identifying trends in data quality issues and taking steps to amend processes to reduce any margin for error.

Fragment 3: NHS Leeds

All staff

- should be aware of the importance of good data quality and their own contribution to achieving it, and
- should receive appropriate training to data quality aspects of their work.

Teams should have comprehensive procedures in place for identifying and correcting data errors, such that information is accurate and reliable at time of use.

Fragment 4: Imperial College London

All data should be subject to internal and external audits if deemed necessary.

Fragment 5: Cambridgeshire and Peterborough Clinical Commissioning Group (CCG)

The CCG recognises that reliable information is fundamental in supporting the CCG to achieve its goals. The CCG recognises that all the decisions, whether clinical, managerial, or financial need to be based on information which is of the highest quality.
