

Stakeholder analysis

Definition

A stakeholder analysis is an [analysis](#) with regard to [stakeholders](#).

Notes

Another definition is:

An overview of all stakeholders and their interest (requirements, needs and expectations) concerning data quality.

A stakeholder rating map is a form of visualization using a quartered chart to show stakeholders in terms of interest and influence/power. See figure 1.

Interest indicates stakeholders' likely concerns, whilst Influence indicates their ability resist your recommendation or change.

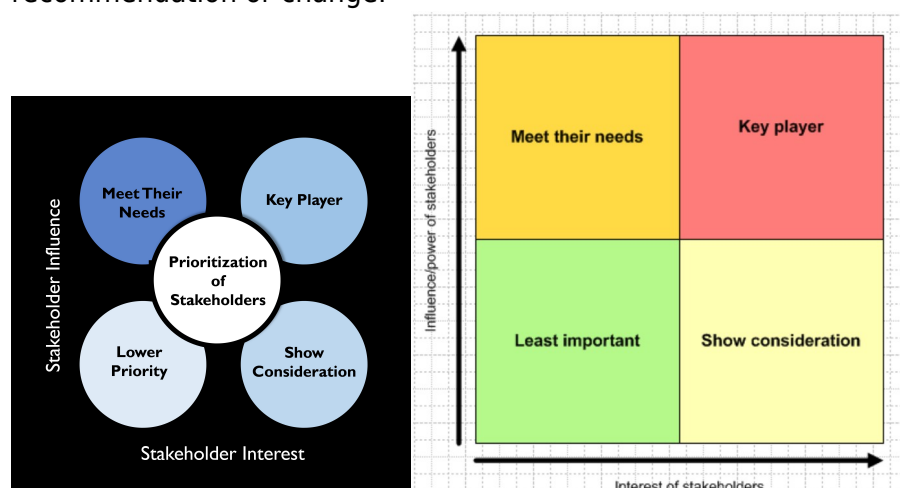

Figure 1: Two models of a stakeholder rating maps

Synonym

Interested party.

Purpose

Purpose of a data quality stakeholder analysis is to consider the requirements, needs and expectations of the stakeholders when managing the [data quality policy](#), [critical data elements](#), and [data quality objectives](#).

Purpose of stakeholder rating map is to prioritize the interest (needs) of stakeholders considering their influence.

Life cycle

Phase	Activity
Plan	<ul style="list-style-type: none">Plan the data quality stakeholder analysisIdentify the data quality stakeholdersIdentify the requirements, needs and expectations of the data quality stakeholders.Rate the influence and interest of the data quality stakeholdersCompose a stakeholder rating mapCompose the data quality stakeholder analysis
Do	<ul style="list-style-type: none">Consider the data quality stakeholder analysis when managing the other elements of the data quality management system, e.g., data quality policy, critical data elements, and data quality objectives.
Check	<ul style="list-style-type: none">Review/evaluate the data quality stakeholder analysis
Act	<ul style="list-style-type: none">Adapt the data quality stakeholder analysis to new insights and circumstances

Characteristics
