

Data governance

Definition

Data governance is [governance](#) with regard to [data](#).

DMBOK2

Data [governance](#) is the exercise of authority and control (planning, monitoring, and enforcement) over the [management](#) of data assets.

Other definitions

- Data governance is the cross-functional discipline of managing, improving, monitoring, maintaining, and protecting data (Askham).
- Data Governance is a collection of processes, roles, standards, and metrics that ensure the effective and efficient use of information in enabling an organisation to achieve its goals (Askham).

Relation

Data governance	is child of	governance
Data governance	is part of	data management
